Second strand cDNA was prepared with the primer adapter of sequence [5' and cDNA was prepared with the primer adapter of sequence [7' constant and constant and and an another and an another and an another security Ks(+) after bulk excision from Lambda FLC I. Cloning sites, 5' end: Sall; 3'

/note="Order of the property of plasmid DNA from three normalized libraries of plasmid DNA from three normalized libraries of plasmid DNA from three normalized libraries (fetal lung NbHL19W, testis NHT, and B-cell NCI_CGAP_CCB1) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified CDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento Soares and M. Fatima Bonaldo. " 829 g 164 t

Anote—"Organ: Kidney; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Plasmid DNA from the normalized library NCI_CGAP_Kid3 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1322376-1323911, 1456007-1456775, and Fatima Bonaldo. "Subtraction by Bento Soares and M.

human secreted proteins, and encode the proteins given in AAY01602 and human secreted proteins, and encode the proteins given in AAY01602 and AAY11994 to AAY1280, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, haematopolesis regulating activity, tissue growth regulating activity, reproductive hormone activity, tumour inhibition activity, or other activity, anti-inflammatory activity, tumour inhibition activity, or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding prometer sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion acid a polypeptide into a membrane, or importing a polypeptide into
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; secreted protein; EST; expressed sequence tag; diagnosis; forensic; gene therapy; chromosome mapping; signal peptide; upstream regulatory sequence; cytokine activity; cell proliferation; differentiation; haematopoiesis regulation; tissue growth regulation; reproductive hormone regulation; chemotactic; chemokinetic; haemostatic; thrombolytic; anti-inflammatory; tumour inhibition.

An alternative sequence for pm633_1 (from cler2) is given in AAY31837. The invention provides new human secreted proteins (see AAZ19837.) The invention provides new human secreted from foetal cell, adult blood, adult brain and foetal solutions of a from foetal cell, adult blood, adult brain and foetal cell, adult blood, adult brain and foetal cetivities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although on supporting data are given. Suggested activities include nutritional, cytokine, tissue growth, cell proliferation and differentiation, immunosuppressive, haematopolesis requiating, activith or inhibin, chemotactic or chemokinetic, haemostatic or thrombolytic, receptor/ligand activity, antiinflammatory, cadherin or tumour inhibition activities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polynucleotides derived from murine foetal cell cDNA libraries,

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by example the disorders include SAPHO Syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the lesions associated with acne vulgaris. A method for detecting the sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies contexting the acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and characterized the acnes polypeptides and the acnes infections. The antibodies may also be used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveltis; endophrhalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for treating acne vulgaris -

                                                                                                                                                                                                                                                                                                                                                                                             is.
diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (BirSA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Drosophila; developmental biology; cell signalling; insecticide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; SEQ ID NO 31584; 21pp + Sequence Listing; English.

The DNA sequence was isolated from a library of clones of S. aureus WGUH 29 in Escherichia coll. The DNA sequence can be used in the construction of ribozymes and antisense sequences to control the expression of Staphylococcal genes. The DNA sequence is also useful as a source of requiatory elements for the control of bacterial gene expression. The present protein may be used to produce vaccines to enable a host to produce specific antibodies with antibacterial action. These vaccines and antibodies would protect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     nseq

```

```
A set of polypeptides (AAW11792-97) have sequences deduced from the 3 reading frames, of both strands, of a human uterine cancer CDNA clone (AAF99474) that corresponds to an expressed sequence tag (EST) of the early onset Alzheimer's disease (EOAD) gene. EOAD gene products (see also AAW1768-91) can be expressed in host cells and used to screen for agonists or antagonists useful in EOAD therapy, or to raise antibodies useful in the diagnosis of EOAD or predisposition to EOAD.

(N.B. in-frame stop codons in the 6 reading frames of the cDNA clone are ignored in the translated polypeptide sequences given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                "amino acid residue at position 103 is
unidentified owing to degeneracy of the
nucleotide sequence"

Human, nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral solerosis; Shy-brager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;
                                                                                                                            A set of polypeptides (AAW11768-73) have sequences deduced from the 3 reading frames, of both strands, of a human amygdala cDNA clone (AAT59470) that corresponds to an expressed sequence tag (EST) of the early onset Alzheimer's disease (EOAD) gene. EOAD gene products (see also AAW11774-97) can be expressed in host cells and used to raise antibodies useful in the diagnosis of EOAD or predisposition
                                                                                                                                                                                                                (N.B. in-frame stop codons in the 6 reading frames of the cDNA clone are ignored in the translated polypeptide sequences given in the specification)
                                                          New Early Onset Alzheimer's Disease gene - used to develop prods. for diagnosis, detection of pre-disposition to, or treatment of Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                   seq_name: /SIDS1/gcgdata/geneseq/geneseqp-embl/AA2001.DAT:AAM39625

```
The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinininin activity, chemotactic/chemokinetic activity, heemotactic/chemokinetic activity, heemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and as says for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Baughn MR;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tang YT,
          The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/linhibin activity, chemotactic/chemokinetic activity, hemotactic/chemokinetic activity, hemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .N.5 disorders.

The present sequence represents a human enzyme. The enzyme polynucleotide and polypeptide are useful for diagnosis, treatment and prevention of cancers, neurological disorders (e.g. epilepsy, stroke, Alzheimer's disease, Plok's disease, Huntingfon's disease, dementia, multiple sclerosis, parkinson's disease, amyotropic lateral sclerosis, backerial and viral meningitis, schizophrenic disorders and neuroskeletal disorders), autolimmune/inflammantory disorders and neuroskeletal disorders), autolimmune/inflammantory disorders and neuroskeletal disorders), autolimmune/inflammantory disorders (e.g. allergies, addison's disease, autolimmune diseases, adult respiratory distress addison's disease, attoin diseases, adult respiratory distress mellitus, osteoporosis, pancreatitis, psoriasis, rheumatoid arthitis, and viral, bacterial, fungal, parasitic, protozoal and helminthic and viral, bacterial, disorder (e.g. Duchenne and Becker muscular dystrophy, Gaucher's disease, Huntington's chorea, sickle cell anemia, thalassemia, von Willebrand's disease and Wilms' tumour), and cell chirhosis, and arteriosclerosis). The polynucleotide is also useful in sommatic or germline gene therapy. The polynucleotide is also useful in
multiple sclerosis; Parkinson's disease; amyotropic lateral sclerosis; meningitis; schlzophrenic disorder; neuroskeletal disorder; allergy; addison's disease; aucmia, asthma; Crohn's disease; addison's disease; syndrome; atopic dermatitis; psoriasis; diabetes mellitus; osteoporosis; pancreatitis; rheumatoid arthritis; infection; genetic disorder; muscular dystrophy; Gaucher's disease; Huntington's chorea; sickle cell anemia; thalassemia; atherosclerosis; von Willebrand's disease; Milms' tumour; cell proliferative disorder; leukemia; hepatitis; cirrhosis; arteriosclerosis; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Burford N;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Seguence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sox
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes primer sets for synthesising 5602

[101] Length cDNAs defined in the specification. Where a primer set
comprises: (a) an oligo-dr primer and an oligonuclectide comprises one of
the complementary strand of a polynuclectide which comprises one of
the 5602 nuclectide comprises at least 15 nuclectides; or (b) a combination
oligonuclectide comprising a sequence complementary to the
complementary strand of a polynuclectide which comprises a 5'-end
sequence and an oligonuclectide comprising a sequence complementary to the
complementary strand of a polynuclectide which comprises a 5'-end
sequence and an oligonuclectide comprising a sequence complementary to a
polynuclectide which comprises a 3'-end sequence.

Complementary strand of a polynuclectide which comprises a 6'-end
sequence and an oligonuclectide comprises a 3'-end sequence of polynuclectide which comprises a 1-east 15 nuclectides and the combination of
the 5'-end sequence 3'-end sequence is selected from those defined in
the specification. The primers are useful for synthesising polynuclectides,
particularly full-length cDNAs. The primers are also useful for the
principle companion and/or diagnosis of the abnormality of the full-length
cDNAs easily without any specialised methods. AAH13628 and
AAH13633 to AAH18634 to AAH13629 to AAH13632
represent human amino acid sequences; and AAH13629 to AAH13632
represent oligonuclectides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs ^{-}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; primer; detection; diagnosis; antisense therapy; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Yamamoto J;

can be used in vaccines to protect birds and animals against intestinal diseases, esp. to protect pigs against porcine proliferative enteropathy. It is the expression product of a DNA molecule (AAT69201) obtd. by screening an L. intracellularis library with rabbit anti-L. intracellularis sera. GroEL, GrOES (AAM16679) and other L. intracellularis polypeptides (AAM16680-85) can be administered as recombinant polypeptides or expressed as recombinant vaccines utilising bacterial, fungal or viral vectors. Antibodies raised against the polypeptides may be useful in immunotherapy, diagnosis of infection and detection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The GroEL heat shock protein (AAW16678) of Lawsonia intracellularis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel DNA sequence (I) that encodes the RNA polymerase I transcription factor TIF-1A which has antitumor, antipoliferative and proliferation-inducing activity. The invention also describes (1) DNA (Ia) encoding a protein (II) with the biological activity of TIF-1A: (2) a ribozyme (R) corresponding to (I) or (Ia) and abecine to bind specifically to, and cleave, its transcribed RNA so as to reduce or inhibit synthesis of the corresponding protein: (3) an antisense RNA (AS) with binding properties similar to R; (4) an extression vector that contains (I), (Ia) or sequences that encode R or (AS; (5) host cells containing the vectors of (4); (6) TIF-1A or (II) encoded by (I) or (Ia); (7) preparation of TIF-1A or (II); (9) antagonists that weaken or block the activity of TIF-1A or (II); (9) antagonists containing the wethod in (10). (1), and similar sequences that encode activity of TIF-1A or (II); (10) a diagnostic method for detecting abnormal TIF-1A expression; and (11) kit for method for detecting abnormal TIF-1A expression vectors containing them, or their expression products are used to treat or prevent disorders containing them containing their expression products are used to treat or prevent disorders associated with reduced cellular proliferation, e.g. after injury or radiation therapy. Ribozymes, antisense sequences directed against (I), also ligands and antagonists of TIF-1A, are used to treat or prevent or prevent.

C also ligands and antagonists of TIF-1A, are used to treat or prevent inhibit proliferation, especially in treatment of cancers. (I) and specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New DNA encoding the transcription factor TIF-1A, useful for preventing or treating diseases associated with abnormal cell proliferation,

The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; ensyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.
ligands for TIF-1A (particularly antibodies (Ab)) are also useful for diagnosis of altered TIF-1A expression by (In) direct determination of concentration, length and/or sequence of TIF-1A or its mRNA, e.g. for detecting mutations. Ab can also be used for immunoprecipitation of TIF-1A and for isolation of related sequences from cDNA expression ibraries. (I) allows recombinant production of TIF-1A in sufficient quantities for therapeutic use.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful treating acne vulgaris -

nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention polypeptides may be used as antigens in the protein in the sample. The specific for P. acnes proteins in the production of artibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from Wipo

myosin-light-chain kinase (EC 2.7.1.117) A - slime mold (Dictyostelium discoideum)

N.Alternate names: M.CK-A

C.Species: Dictyostelium discoideum

C.Datr-1929 sequence_revision 21-Jan-1997 #text_change 11-Jun-1999

C.Accession: A40811; A37125

N.Fitle: Characterization and bacterial expression of the Dictyostelium myosin light characterization and bacterial expression of the Dictyostelium myosin light characterization and bacterial expression of the Dictyostelium myosin light characterization and bacterial expression of the Dictyostelium myosin light characterization and bacterial expression of the Dictyostelium myosin light characterization and bacterial expression: A40811; MUD:91340753

A.Molecule type: mRNA

A.Rocassion: A51126

A.Molecule type: Dictyostelium myosin light chain kinase. Purification and characterization.

A.Rocassion: A57125; MuID:90337997

A.Molecule type: protein

A.Molecule type: protein
                                                                                                                                                                                                                                                                                                                                                                                      Rischet, P.

Submitted to the EMBL Data Library, July 1997

A. Description: The sequence of C. elegans cosmid K09F6.

A. Reference number: 221122

A. Accession: T32093

A. Status: preliminary: translated from GB/EMBL/DDBJ

A. Molecule type: DNA

A. Residues: 1-351 < CCH>
A. Residues: 1-351 < CCH>
A. Stroye: EMBL: AF016683; PIDN: AAB66192.1; GSPDB: GN00020; CESP: K09F6.1
